# Designed for Simplicity

## DB-C / DB-CV APPLICATION

The Cleaveland/Price DB-C and DB-CV are three pole, group operated, copper double break switches for substation installations. The DB-C has parallel insulators while the DB-CV's stationary insulators are in a "V" configuration. The switches are suitable for use in a variety of applications including line disconnecting, circuit breaker bypass and isolation, and transformer isolation. The switch may be manually operated by use of a wormgear mechanism or electrically operated with a type TP-C2 motor operator. The DB-C and DB-CV can be mounted in the horizontal upright, vertical, or horizontal underhung position.

Accessories and options needed to adapt the switch to a customer's particular requirements are available. Arc horns or quick break whips can be supplied when small amounts of magnetizing or line charging current must be interrupted.

The switches meet applicable NEMA and IEEE Standards and the rating requirements of applicable IEC Standards.

The DB-C and DB-CV follow the Cleaveland/Price tradition of designing simple, dependable switches without the use of castings. Knowledge gained from maintaining switches in the field for over 60 years has played a major part in designing the DB-C.

The DB-CV uses the same current carrying parts as the DB-C, however, the jaw end insulators are inclined. By having the jaw end insulators inclined, the cable conductors establish electrical clearance from the base without the need for wire guides or outriggers. The inclined insulator design makes the switch suitable for low profile substations.

# Engineered for Performance

## Contact and blade details

- Live parts constructed from hard-drawn, high conductivity copper producing stronger, more conductive components than parts made of cast material
- High-pressure line contacts at the break-jaws
- Proven high-pressure ring contacts backed by stainless steel contact springs at the folding blade joint
- Blade guide on the break-jaw as well as the leading edge of the blade for reliable contact entry, eliminating the need for fine blade entry adjustment
- Folding blade spring assembly with fully enclosed stainless steel springs
- Stainless steel live parts hardware
- Stainless steel, type 316 corrosion-resistant contact springs

## Rotating insulator bearing details

- High strength, non-cast, hot-dip galvanized steel shaft
- Non-ferrous seal retainer
- Special ozone and UV resistant seals outlast conventional seal and contain no metal parts that typically corrode
- Maintenance-free, permanently lubricated construction
- Individually sealed ball bearing assemblies in sealed grease-packed housing
- Permanently adjusted bearing

## DB-C and DB-CV Design Advantages

- Total non-cast copper and steel construction resulting in superior dependability of parts
- Simple
  - No blade rotation mechanism head on the rotating insulator
  - Switch does not depend upon precise blade turnover in a break-jaw to attain full contact pressure
- Quick and easy installation with adjustment-free “fold and lock” contact system
- Parallel blade design
  - Better performance at all contact points under short circuit due to magnetic attraction of the truss blades
  - Airflow through the blade cools the blade efficiently
- Wiping contacts at all moving contact points
- Blade leveling adjustment as well as leveling screws at the stationary insulators
- Folding blade design has superior ice breaking ability
- Direct entry of the blade into the break-jaw
  - Eliminates the effect of contact drag when closing, assuring complete closing of the switch for maximum contact pressure

# Operators / Accessories

*Geared handcrank operator with unbreakable, non-cast stops.*

*Motor operator type TP-C2 with torque relief decoupler (shown uncoupled).*

## Standard Operator Features

- Wormgear operator
- Padlock provision in both the open and closed positions
- Tin-plated ground strap for vertical operating pipe
- Adjustable stops
- Clamp-on open/closed indicators
- Self-lubricating, maintenance-free outboard bearing
- 2" IPS galvanized steel vertical operating pipe
- Adjustable radius outboard bearing lever
- Threaded interphase and drive lever adjustment

## Ordering Information

### Furnish:

- Switch type
- Voltage
- Amperage
- Momentary rating
- BIL level
- Mounting position
- Operator type
- Accessories required

## Available Accessories

- Arc horns
- Quick break whips
- Auxiliary switch assembly
- Braidless ground
- Electrical interlock
- Extended operator
- Ground blades (consult the factory for ground blades on the DB-CV)
- Insulated interphase pipe
- Insulated vertical pipe
- Key interlock
- Mounting hardware
- Operator grounding platform
- Outriggers
- Spill gaps
- Terminal connectors
