## Type RL-C Switch Engineered for Simplicity

## Engineered for Performance

LONG WIPE SAFETY MARGIN BETWEEN FULLY CLOSED AND MINIMUM CLOSED

## Long-Term Contact Integrity

PROBLEM: Traditional disconnect switches may lose travel over time due to linkage tolerances and increases in contact friction. Reduced travel may prevent the switch from attaining maximum contact pressure, resulting in pitted and burned contacts. Some side break switches also depend upon critical adjustments during installation to operate properly.

SOLUTION: Long-wipe contacts that allow a generous contact engagement range. Variations in blade travel do not affect switch performance. Because there are no critical adjustments necessary when installing the RL-C, installation time is reduced.

## Effective Hinge Contact

The hinge contact with four silverplated rings utilizes electromagnetic squeeze for outstanding performance in short-circuit duty. This amazingly simple contact requires no maintenance because the contact disks seal out dirt and moisture and retain lubrication.

## Blade Over-Travel Protection

In addition to the adjustable stops at the operating handle, the RL-C features a blade stop in the break-jaw assembly to prevent over-travel of the blade in the contact making position. The blade is captured in the break-jaw to maintain its position despite insulator movement during high fault currents.

## Designed for Versatility

The RL-C disconnect switch is easily adaptable to special applications. This uniquely designed side break switch is available as a group operated double throw switch and as a group operated tandem transfer switch. It also can be supplied as a double throw with grounding position, which automatically grounds the hinge end of
the switch when the switch is in the fully opened position. This design eliminates the need for a separate ground switch with separate operating linkage and interlocking apparatus.
The low profile of the RL-C makes it ideal for installations where overhead clearance distances are critical.

## Operators/Accessories

Maximum mounting height with standard operator is 23 feet. An extended operator to accommodate switches mounted higher than 23 feet is available. Switches also may be mounted vertically or underhung. The RL-C can easily be pole mounted.

## Standard Operator Features

- Swing handle
- Operator can be padlocked in both the open and closed positions
- Ground strap for vertical operating pipe
- Adjustable stops
- Open-Closed indicators
- Self-lubricated, maintenance-free outboard bearing
- 1-1/2" IPS galvanized steel vertical operating pipe

## Operator Options

- Geared handcrank
-10:1, 20:1 and 40:1 gear ratios available
- Motor operator
-AC or DC operating voltage
-Torque relief decoupler
- Reciprocating pump handle

## Ordering Information

Please furnish the following:
Switch type
Voltage
Amperage
Momentary rating
BIL level
Mounting position
Operator type
Accessories required

## Available Accessories

Arc horns
Auxiliary switch
Braidless ground contact
Electrical interlock
Extended operator
Ground blades
Ground blade mechanical interlock
Insulated interphase pipe Insulated vertical pipe Interrupting device
Key interlock
Mounting hardware
Operator grounding platform
Quick break whips
Spill gaps
Terminal connectors
Universal joint assembly for
offset direct drive

## Other C/P Switches

C/P makes a wide range of disconnect switches for various applications.
Among the types for outdoor use are the:

V2-C - copper vertical break switch
V2-CA - aluminum vertical break switch
DB-C - double break switch
CB-C - copper center break switch
CB-A - aluminum center break switch
LCO-C - hookstick switch
This brochure describes standard product and does not show variations in design that are available. Contact the factory for additional details.
