

Automation Accessories Test Devices

Smurff™ Tester

The surge arresting device supplied in Cleveland/Price motor operators is a combination of MOVs, avalanching diodes, and surge capacitors. Over time, surges seen by the device will tend to degrade the effectiveness of the MOVs. Smurffs should be electrically tested whenever the controller is being serviced or when the battery is being replaced.

Part No. C111A222H01

LVA Tester

The LVA tester is a device used to test the accuracy and performance of the Cleveland/Price loss of voltage actuator accessory. It enables the user to check the accuracy of the auto-actuate minimum and set time, and verify the low voltage actuation setting.

Part No. C111A223H01

Digital Battery Tester

The hand-held digital battery tester applies a load to the battery for 10 seconds and provides a digital readout of the loaded battery voltage. LED Indicating lights display test results as a OK, Bad, or Weak. The tester will also test charging system output.
